Nicholas **Ketz**, PhD

Applied Research Scientist: Artificial Intelligence, Bioinformatics, Complex Systems, Human Studies

nick.ketz@gmail.com nickketz.github.io www.linkedin.com/in/nickketz

Summary | Applied scientist developing machine learning solutions to advanced research problems. Interests in understanding and developing intelligent systems (human and artificial); analysis and visualization of complex, high-dimensional data; quantitative approaches to aesthetics and consciousness. Experience in academic and industrial research, product development and human studies.

RELEVANT EXPERIENCE

DNA Large Language Modeling | Gene therapy, cross-species engineering 03/2022 - Present

Generative AI | Video and images grounded in learned human concepts 01/2020 - 01/2022

Model Based Reinforcement Learning | Agent based domain adaptation 01/2020 - 01/2022

Lifelong Deep Learning | Sequential multi-task learning in deep neural networks 09/2018 - 01/2021

Closed-loop Neural Stimulation | Device/algorithm development in humans 09/2016 - 06/2018

EDUCATION/EMPLOYMENT

Colossal Biosciences/Form Bio | Principle AI/ML Scientist 02/2022 - Present

HRL Laboratories | Research Scientist: Information and Systems Sciences 09/2016 - 01/2022

University Colorado, Boulder | PhD: Computational Cognitive Neuroscience 09/2010 - 09/2016

New York University | Research Assistant: Davachi Human Memory Lab 09/2007 - 07/2010

University Minnesota, Twin Cities | BA:Physics, minor:Psychology 09/2003 - 06/2007

TECHNICAL SKILLS

Deep Learning | Convolutional, Recurrent, and Transformer Neural Networks. Deep Reinforcement Learning (model-free and model-based). Unsupervised learning (auxiliary tasks, semi-supervised)

Machine Learning | Non-differentiable Optimization (CMA-ES, MCMC), Probabilistic Inference (Clustering, Gaussian Process, Bayesian Optimization), Unsupervised Learning (KNN, PCA, ICA, t-SNE, UMAP)

Statistics | Parametric and non-parametric inference in linear and non-linear models: GLM, Random Effects, Bayesian, A/B (hypothesis) testing, time-series analysis, experimental design

Programming/Computing Packages | Python (PyTorch, Tensorflow, Numpy, Scipy, Scikit-Learn, Jupyter/Collab, HuggingFace), MATLAB, R, CUDA GPU, Git, Docker, AWS, GCP

SELECT PUBLICATIONS/PATENTS/WHITE PAPERS

US Patent 2024 | System and method for semantically grounded video generation
Sasha Strelnikoff, **Nicholas A Ketz**, Praveen K Pilly; Generative video AI system prompted by learned human concepts

White Paper 2022 | Model Interpretability Methods to Predict Gene Therapy Manufacturing Failures
Nicholas Ketz; Extracting learned motifs from DNA sequence models predictive of gene therapy manufacturing failures

US Patent 2020 | System and method for optimized independent component selection for automated signal artifact removal to generate a clean signal
Nicholas Ketz, Matthew E Phillips, Praveen K Pilly; Scalable solution for removal of nuisance components in time-series data

ICLR 2019 | Sliced cramer synaptic consolidation for preserving deeply learned representations
Soheil Kolouri, **Nicholas Ketz**, Andrea Soltoggio, Praveen K. Pilly; A novel framework for overcoming catastrophic forgetting by preserving the distribution of the network's output at an arbitrary layer
