

Nicholas Ketz PhD.

Applied Research Scientist: Artificial Intelligence, Bio-informatics, Mathematical Models, Human Studies

Summary 🏠 Austin, TX, USA ✉️ nick.ketz@gmail.com 🌐 in/nickketz 🌐 nickketz.github.io

I am an applied scientist developing machine learning solutions to advanced research problems. I have more than 10 years of experience in both academic and industrial research labs. I have experience individually contributing, leading small teams and coordinating across multiple departments throughout the entire AI product life cycle.

Relevant Experience

- | | |
|---|-------------------|
| Large Language Modeling | 03/2022 - Present |
| • Developing machine learning solutions for gene therapy and cross-species engineering applications in biotechnology | |
| Generative AI | 01/2020 - 01/2022 |
| • Created AI systems for generating video and images grounded in learned human concepts and semantic understanding | |
| Model Based Reinforcement Learning | 01/2020 - 01/2022 |
| • Developed Agent-based domain adaptation techniques within autonomous driving using model-based reinforcement learning | |
| Lifelong Deep Learning | 09/2018 - 01/2021 |
| • Researched methods for sequential multitask learning in deep neural networks to preserve performance across distribution shifts | |
| Closed-loop Neural Stimulation | 09/2016 - 06/2018 |
| • Developed devices and algorithms for closed-loop neural stimulation in human subjects to enhance cognitive performance | |

Education/Employment

- | | |
|---|-------------------|
| Principal AI/ML Scientist <i>Colossal Biosciences/Form Bio</i> | 02/2022 - Present |
| • Advise and review team in the full AI life cycle using genomic, conservation and biological data | |
| Research Scientist: Information and Systems Sciences <i>HRL Laboratories</i> | 09/2016 - 01/2022 |
| • Basic AI research funded by Department of Defense and product development for aerospace and automotive industries | |
| PhD: Computational Cognitive Neuroscience <i>University of Colorado, Boulder</i> | 09/2010 - 09/2016 |
| • Development of biologically inspired neural networks informed by neuro-imaging experiments of cognitive function | |
| Research Assistant: Davachi Human Memory Lab <i>New York University</i> | 09/2007 - 07/2010 |
| • Supported graduate level research for neuro-imaging of human long-term memory system | |
| BA: Physics, minor: Psychology <i>University of Minnesota, Twin Cities</i> | 09/2003 - 06/2007 |
| • Studied physics with a minor in psychology, with research experience in particle physics and cognitive-neuroscience | |

Skills

- **Technical:** Deep Learning (CNN, RNN, Transformers, RL), Machine Learning (Optimization, Probabilistic Inference, Unsupervised Learning), Statistics (Bayesian, Parametric/Non-parametric, Time-series), Programming (Python, Bash, SQL), Agentic AI (LLM agents, tool-use orchestration, agentic coding workflows), Cloud (GCP)
- **AI Lifecycle:** Full-cycle AI development (proof-of-concept to production), cross-team product development, agentic development workflows for code and product delivery, containerized system design, CI/CD pipelines
- **Professional:** Team leadership, cross-departmental collaboration (engineering, product, sales), client/stakeholder management, project coordination across multiple research domains and organizations

Select Publications/Patents/White Papers

- | | |
|---|-----------------------|
| System and method for semantically grounded video generation | US Patent, 2024 |
| • Generative video AI system prompted by learned human concepts | |
| A domain-agnostic approach for characterization of lifelong learning systems | Neural Networks, 2023 |
| • DoD project for evaluating neural network systems across multiple domains and tasks | |
| Model Interpretability Methods to Predict Gene Therapy Manufacturing Failures | White Paper, 2022 |
| • Extracting learned motifs from DNA sequence models predictive of gene therapy manufacturing failures | |
| Sliced Cramer synaptic consolidation for preserving deeply learned representations | ICLR, 2020 |
| • Framework for overcoming catastrophic forgetting by preserving the distribution of the network's output at an arbitrary layer | |
